

Firewall as-a-Service

→ Protect your entire network and every user

Vastnet Firewall-as-a-Service (FWaaS) is a genuine next generation firewall service, deploying integrated capability like intrusion prevention, web content filtering, application control, anti-virus and anti-malware threat protection to combat the increasingly complex security challenges every business faces.

All your network and cloud traffic passes through a central firewall, allowing you to configure and apply a unified security policy without needing to manage updates and align firewall settings at each location. Inbuilt VPN capability connects all users securely, reducing your attack footprint.

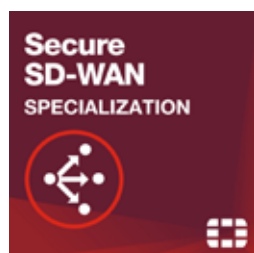

→ Monitor, Manage, and Report

Event-based alerting monitors active security threats, while powerful reporting can be scheduled in line with organisational and compliance requirements.

Vastnet FWaaS rapidly scales to handle the traffic inspection workload required by your business and extends consistent high-level threat protection as you add new sites and users.

→ Security Solution Specialists

Our expert team of qualified Fortinet Network Security Experts have been recognised with dual specialisation accreditation, making us your first choice for expert advice and world-class protection of your business network.

NEXT GENERATION SECURITY

Constantly updated defences protect your business network in a complex and changing security environment.

ENTERPRISE GRADE MADE EASY

Get dependable high-level threat protection for your business without hiring specialist IT personnel or buying hardware.

PREDICTABLE PRICING

Our scalable subscription model means you pay only for the protection and bandwidth your business needs.

MONITORING & REPORTING

Analyse threats and monitor compliance with the one-stop management portal and adaptable reporting capability.

EXPERT REASSURANCE

We partner with global security expert Fortinet, backed by our expert team of accredited Network Security Experts.

Get the facts about your network security - ask us about a **FREE Cyber Threat Assessment** for your business today!

→ High Availability Performance

Vastnet FWaaS operates on high performance infrastructure, offering the reassurance of 99.9% uptime, supported by our Australian service desk and accredited Fortinet Network Security Experts.

→ Fully Featured Next-Generation Security

Vastnet FWaaS is much more than a traditional firewall. Our next generation solution integrates a suite of security functions to protect your business network, users, and devices from complex and changing threats.

→ Scalable Pricing

Pricing scales according to bandwidth and security logging data consumption, keeping you in control of your business security budget.

→ Flexible Configuration Options

Security features can be configured to meet your business requirements and budget. Our streamlined pre-sale and transition process delivers optimal protection for your business from day one of operation.

Application Control

Allow, deny, or restrict access to applications to improve security and enforce your acceptable use policy.

Web Filtering

Protect your business and increase staff productivity by blocking access to malicious, hacked, or inappropriate websites.

Anti-Virus Protection

Remove viruses, analyse suspicious files using the Cloud Sandbox, and apply botnet protection to your network traffic.

Intrusion Prevention

Protect against the latest network intrusions by detecting and blocking threats before they reach network devices.

Domain & IP Reputation

The Fortinet distributed network of threat sensors and collaborative global sources proactively blocks attacks.

Data Leak Prevention

Prevent sensitive data such as credit card numbers from leaving or entering your network.

Web Application Firewall

Protect critical data and applications against sophisticated threats such as SQL injection, buffer overflows, file inclusions, and more.

Deep Packet Inspection

Allows the inspection of encrypted secure web traffic to detect malicious content and enforce policies at all layers to combat threats.

VPN

Create secure communications channels between networks and allow remote users to safely connect using SSL-VPN and IP-SEC VPN.

SD-WAN

Business-critical applications are prioritised, increasing productivity and performance without compromising security.

Traffic Shaping

Configure policies to define how specific types of traffic are shaped by the firewall.

Load Balancing

Configure load balancing, HTTP multiplexing, and SSL offloading.

Self Reporting & Management

Powerful reporting function can be configured and scheduled to align with business and regulatory compliance requirements.

Wireless and Switch Controller

Integrated controller lets you add wireless interfaces (SSIDs) to your business WiFi network and configure security features.
